DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-58 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1-56 of copending Application No. 10/636,470. Although the conflicting claims are not identical, they are not patentably distinct from each other because the same relationship of elastomer layer hardness is taught in similar fuser members and applications.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen (6,312,817) in view of Henry (5,530,536). Chen teaches a fuser member where a elastomer cushion layer and a surface layer contain filled polydimethylsiloxanes (examples and claims). Chen suggests that the layers have a similar hardness (col. 3 lines 43-57). Chen does not teach the specific hardness of the elastomer layers. Henry teaches similar fuser member containing silicone elastomer (col. 6) where a specific hardness is disclosed (claim 9). It would have been obvious to one of ordinary skill in the art that the polydimethylsiloxanes elastomer layers of Chen would be of a desired hardness because of the direct suggestion of Henry and the known performance of fuser members of the prior art would dictate a predictable hardness for similar performance.
